high pressure cleaners

TIGER SERIES

Like all models in the acclaimed EDGE range of high pressure cleaners, the Tiger sets new standard in power and control. A new pump option gives an output of 200 bar (2900 p.s.i.) at 21 Litres water flow per minute. Powerful enough for the very largest jobs. This advanced machine has new control features which include: Leak Detection. Automatically shuts off the machine if a leak develops. Total stop. This shuts the machine down if it is not used for a pre-set period of time. This overrides the auto start/stop feature and prevents the machine remaining in a live condition when unattended.

TIGER

Designed to provide ample power with built-in durability for the toughest of cleaning jobs. The Tiger's are equipped with a 3 cylinder cranked piston pump unit, with an overload protected motor. The burner, with labyrinth combustion ensure both fuel efficiency and minimum boiling wear. This contributes to greater reliability and a long working life. A choice of 4 machines are available including 240, 110 and 415 volt power.
