

CARPETLINE 500SA / 700TA

The Edge Carpetline 500SA / 700TA are designed to clean medium to very large carpeted areas. Practical and easy to use, these professional carpet cleaners are ideal for use in hotels, conference centres, exhibitions halls, airports and large offices etc. Their narrow width also permits them to clean in confined spaces such as corridors and passage ways. These self-contained extraction machines provide you with everything you need to get outstanding results, however tough the challenge. These machines are competitively priced to give you good value for money, your investment will quickly be repaid by the time you save on each job. The 500SA is particularly quiet (only 60 decibels) making this model ideal for noise sensitive areas. It uses brush assisted traction, it can also be used with a hand tool or wand for cleaning in small areas or corners. The 500SA can also be used for cleaning hard floors by fitting the optional brush and squeegee tool. The 700TA has traction drive with speed control providing ease of operation to clean large areas of carpet. It washes, brushes and dries a width of 50cm in a forward pass. The 70 Ltr capacity solution tank provides longer autonomy. The 700TA benefits from a differential driving motor which allows the machine to turn without effort, giving it good maneuverability even in narrow rooms or corridors. The pressure of the rotating brush and solution flow on the carpet can also be regulated on both models.

The principle is simple, spray-nozzles apply the carpet cleaning detergent whilst a rotating brush distributes the detergent, and beats into the carpet pile ensuring deep penetration for a thorough clean. Then finally a powerful vacuum extracts the dirty solution up into a waste recovery tank. A professional solution to effective carpet cleaning.
